

Emotional Trainer

Release Notes

Summary of Working Features

1. Caregivers can create an account- Caregivers can go to a register page and create an account on the database. The register page has validation using javascript to ensure that the information inputted by the caregiver is valid. The caregiver will also be able to upload an image of themselves which will be stored in the database.
2. Caregiver can change the information about his profile- The caregiver can go to an edit caregiver profile page where they can edit basic information about themselves. This will be updated in the database.
3. Caregivers can create an child account- Caregivers can from their profile create a child accounts consisting of their own user name and password. These accounts are associated with the caregiver's account so that they monitor the progress of the child.
4. Caregivers should be able to upload media associated with the emotions of happiness, sadness, anger, and fear- Caregivers can access a media page where they will see four buttons, one for each emotion. they can click on any one emotion where another button will be revealed, add media. When they click on this button they will be able to add media to that particular emotion in two different ways. The first is they will be able to browse and select the stock image for that emotion. The second is that they will be able to upload media from their computer.
5. Caregivers should be able to delete media they've uploaded- Once the caregiver has upload media, they can view the media in the media page by clicking on one of the emotions. On the top right cornor of every media there will be an 'X' button where if they click on it the media will be deleted from their system. Only user uploaded media will be deleted off the database, stock imaged will only have their associations removed from the caregiver/child
6. System should prevent unauthorized users from viewing media uploaded by others- The media uploaded by the caregiver are for the their account only as the media is only associated with their account.

Known Limitations and Bugs

Caregiver Account

1. Currently when an account is created there is no email notification that the account has been created.
2. There is no method for the caregiver to reset their password (by email)
3. Account can be created with the same email address, thus leading to duplicate accounts.
4. There is a bug when displaying the DOB on the Edit Profile page (and it should really display it in the DOB fields.)

Child Profile

1. Formatting problem when displaying information about the child.

Media Page

1. The 'Edit Media' button is non functional
2. Bug when uploading media and then uploading media again without closing the add media page, it will always upload to the anger emotion
3. The close button on the add media page should be on the upper right cornerr
4. There is no confirmation for deleting media

5. When uploading media, it does not show you a preview of what you are adding

Features for next release
