

Coding File Structure - Emotional Trainer

By Chameleon Designs (Moinak B. Kevin J. Mudit P. Jessica B. Jacob S)

Naming Guidelines

- All names should be full words - FirstName (not FName, FN etc.), DOB is fine.
- All names should be in Camel case - FirstName.
- *italicized filenames* are temporary/test files. Useful code should be merged into an appropriate file and the rest should be discarded when it's no longer relevant.
- **red filenames** are files which have already been replaced by a new file. References to these files should be corrected aggressively.

File Structure

- **caregiver - folder for caregiver site files**
 - **img - folder to store images for caregiver site**
 - addMediaButton.png - button on header to add media for child
 - border.png - border for navigation buttons
 - bottom.png - lower shadow on register.html
 - editMediaButton.png - button on header to edit media for child
 - header.png - the Emotional Trainer logo
 - calendar.gif - calendar icon on register.html
 - shadow.gif - shadow on register.html
 - top.png - upper shadow on register.html
 - **include - folder to store the scripts that are called on every page.**
 - header.php- file that sets up the icons on the header.
 - phpFunctions.php- This is the file to check whether the email address that a new user wants to register with, is already in the database.
 - sessionManagement.php - File that does the session management.

PHP Files

- addChild.php - allows a caregiver to add a child profile.
- addChildSubmit.php - the script that is called when the user clicks submit on addChild.php. This file interfaces with the database.
- addMedia.php - This page contains the code to add the media from the user to the database.
- caregiverHome.php - Landing page for Caregives post-login.
- childProfile.php - Profile page of the child
- editCaregiverProfile.php - allows caregiver to edit his/her profile
- editCaregiverProfileSubmit.php - the script that is called when the user clicks submit on editCaregiverProfile.php. This file interfaces with the database and makes the necessary edits.
- editChildProfile.php - allows caregiver to edit his/her child's profile
- editChildProfileSubmit.php - the script that is called when the user clicks submit on editChildProfile.php. This file interfaces with the database and makes the necessary edits.
- globals.php - code to make a connection to the mysql database with the

necessary credentials.

- index.php- Shows caregiver options to log in or register. (Login is embedded in the page, registration is a separate link). This is the homepage for our website.
- login.php - file that is called after user enters login credentials and clicks 'Login' on the site homepage (index.php). This file interfaces with the database and checks the accuracy of the user logging in.
- logout.php - script called when user wishes to log out. This file deletes the session and the related cookies.
- media.php - the media manipulation page for the caregiver
- register.php- page that allows a new user to register as a caregiver.
- registerSubmit.php - page that is called after the user clicks on 'Register' in register.php. This file interfaces with the database and adds the caregiver.
- upload.php - File that is called when the user wants to upload a file from the hard-disk to our system.

CSS Files

- caregiver.css - styles for the caregiver site
- indexStyle.css - styles for the index page specifically
- registerStyle.css - styles for the register page specifically
- view.css - style file for the registration form (autogenerated)

JavaScript Files

- calendar.js - autogenerated code that is used in register.html to provide the fancy calendar interactions.
- caregiver.js - contains general functions for the caregiver side of Emotional Trainer. (e.g. logging out)
- validation.js - javascript code that does client-side validation on user input from forms
- view.js - autogenerated code used by register.html to do something unknown.

- **child - folder for child site files**

- **img - folder to store images to child site**
 - icon_check.png - Login button for the child homepage
- child.css - css style file for child site
- child.js - contains general functions for the child side of Emotional Trainer. (e.g. logging out)
- editProfile.html - page that allows a child to edit his/her profile
- homepage.html - gives the child navigation between testing, editing profile, scorecard, and logging out.
- index.html - the child's login page.
- scorecard.html - allows a child to see his/her scorecard/preformance

- **shared - folder to store files shared between the caregiver website and the child website.**

- **stock** - folder to store the stock images that will be used by both caregiver and the child. All the images will be stored in the database and this is a TEMPORARY location.
- **user**- folder to store the added images by the caregiver that will also be used by the child. All the images will be stored in the database and this is a TEMPORARY location.
- **Test - folder to store code to test new features.**
 - **ImageDB** - folder that stores test code for uploading images to the database
 - **urlFileUploadTest** - file that tests the feature to upload an image given a url.
- index.php - will allow navigation into either the caregiver or the child website.
- ***Jacob Test** - Jacob's test files*
 - *index.html* - a resolution-independent layout
 - *style.css* - CSS code for the resolution-independent layout in index.html
-
- *index_test.html* - Jacob's EM based layout
